

# Corporater

Corporater leverages the Qlik Sense® to deliver Business Outcomes

## Challenge

Corporater was looking for analytical capabilities to help its customers visualize and make sense of their vast and varied data. While Corporater typically developed software internally, they felt that partnering with, rather than building, a visual analytic tool would be more cost effective. They evaluated a number of options looking at:

- Ease of integration with the Corporater platform
- A company with a good reputation, that was easy to do business with
- Excellent data visualization capabilities

## Solution

Today, Corporater uses Qlik Sensewhite labelled into its business management platform. Corporater is now able to offer their customers a full suite of business management solutions including BI, planning, and execution, empowering them to achieve business outcomes.

## Value

- Ability to offer a complete suite of business management tools, including BI, allowing customers to visualize data across business silos
- Delivers the means to visualize data from across business silos, gain insight, take action and execute to deliver the best business outcomes
- Single platform approach, fast time to market, and ability to explore large data volumes
- Minimizes development resources, allowing Corporater to focus on its core strengths

“On a long-term basis, we know that Qlik will always be among the best - if not the best. So it gives me confidence that we have chosen the right partner.”

Tor Inge Vasshus, Founder & CEO, Corporater
