Supply Chain Management

Covid-19 Solutions

COVID-19 is an unprecedented humanitarian and economic crisis affecting everyone across the world.

During these unusual times, businesses need to understand the impact on their supply chains and then respond with data-driven supplier policies, plans and actions to keep supply chains safe and resilient, including when customer demand returns.

To help achieve these goals, Qlik® is providing a solution accelerator that brings together powerful analytical capabilities and COVID-19 data from a number of key sources. These COVID-19 data sets can be updated regularly, are analytics-ready and can integrate with your internal supplier, inventory and sales order data. The solution accelerates the time to integrate COVID-19 data and produce a customized Supply Chain Management solution by providing a starter data model, visualizations, and KPIs. One immediate reality everyone is facing is the dire need of provisioning medical resources, including personal protective equipment (PPE), such as masks, in areas of current and projected shortage. This is squarely at the heart of the mission of our customer, Direct Relief and its global project to equip doctors and nurses with life-saving medical resources to care for the world's most vulnerable people.

The solution can be deployed on a customer's existing Qlik Sense® infrastructure or on Qlik's Software-as-a-Service (SaaS) and generally can be up and running within days or weeks depending on the level of customization required. Qlik Consulting can help with any work required and Qlik Education courses are available to help with data literacy.

Please reach out to solutions@qlik.com if you would like to leverage this solution in your own Qlik Sense environment. We are all in this together and would be proud to support you.

More information about how Qlik is helping our customers and the wider communities can be found at https://community.qlik.com/t5/COVID-19/gp-p/covid-19-group

Covid-19 Solutions for
Supply Chain Management

Key Solution Benefits

- Enables identification of current or projected supply shortage

- Provides access to a rich set of COVID-19 data sets

- Identify where there is the need for the deployment of masks, gloves, gowns, ICU medicines and more

- Easy to combine with your internal data enabling you to respond with data-driven policies, plans, and actions to keep supply chains safe and resilient
